**67 200 Child Pornography Titles that were in the possession of Viacom's board members hands but they did nothing about stopping its distribution:**

<http://www.antitrust.slated.org/media-defender/4307.html>

Re: Individuals at Microsoft/Cnet are building a Network to control the Internet as an IPTV distribution system at the expense of Industry and worse... Children's innocence.

This document will point to key individuals in major corporations who have colluded to not just hide the existence of these films but actually encourage the growth of the Network that hosts them.

This includes images and videos of infants and small children being raped and molested. They know what has happened and they continue to encourage the Network's use and its distribution as much as possible. Paul Allen, Sumner Redstone, Shelby Bonnie, Jarl Mohn and Quincy Smith have never been held accountable.

The purpose of Microsoft/CBS/Cnet's scheme is to distribute this peer to peer software (Bittorrent, Lime Wire, Azereus, Kazza, FrostWire and many others), to create an IPTV Network to dominate the Internet as a Video distribution platform. Note that over several years, this peer to peer Network would save CBS billions of dollars in bandwidth charges whilst delivering Video across this Network.

Please note that Lime Wire and Kazza have been outlawed in the US and Azereus is illegal in France. Technically speaking Frost Wire and Bittorrent is in fact Lime Wire and Azereus combined. And these companies continue to abuse their powers and hide behind a twisted guise of decency.

Key individuals who fund and manage Microsoft/CBS/Cnet activities also created an organization called MediaDefender. MediaDefender was meant to oversee and monitor the distribution growth of this Network. MediaDefender was presented to other media companies like NBC as a Copyright protection group to which NBC and others paid millions of dollars in fees to protect them from piracy.

Incredibly, the officers of MediaDefender actually engaged in trafficking pornography to the Users themselves whilst knowing that the primary Users of this software were children.

## Internet Child Pornography & The Law: The Chain of Liability

CBS owns Cnet.com an integral part of the Chain of Liability – being the nearly exclusive commercial distributor of P2P file sharing software for over a decade.

### I. The Shocking Truth.

**1yo massage-baby boy sex child porn-masturbating an infant bo(2).rar  
bad girl 5 - asian nude - bad girl 5  
best russian trio, father and 2 young daughter amatuer sex porn  
Best Russian Trio, Father And 2 Young Daughters Incest (Sexe Sp  
Incest - Young Teenage XXX - 2 Young Girls do their lucky broth  
Mario world 2 yoshi island**

The titles listed above are excerpts from 67,200 titles of Child Pornography Videos taken from hacked emails found on MediaDefender's mail server. The numbers found in these descriptions are actually the ages of the Children being raped, abused and exploited.

If you missed it at the beginning, a full list of these titles can be found at the following web address:

<http://www.antitrust.slated.org/media-defender/4307.html>

These videos were and are freely available online through most file sharing P2P applications like Lime Wire, Azereus, Edonkey, Frostwire and Bittorrent.

MediaDefender Inc. was a company that offered services designed to prevent alleged copyright infringement using peer-to-peer distribution. They are controversial because of their use of unusual tactics, such as flooding peer-to-peer networks with decoy files that tie up users' computers and bandwidth.

MediaDefender also owned and controlled many porn sites of its own. Individuals within the company promoted their sites by labeling videos with popular mainstream recording artists names, such as Britney Spears. When children then open these files, they would often find ads for the porn sites owned by MediaDefender itself.

<http://torrentfreak.com/mediadefender-emails-leaked-070915/>

More on MediaDefender later...

### II. The Reality

The following statements are supported by volumes of evidence that resulted from fact-finding corroborated by credible sources.

## Controlling the Media via Illegal Means.

In an attempt to control the Media on the Internet, a decade long planned scheme by a handful of people was carried out in an extraordinarily immoral and illegal method.

Shockingly, these individuals through their corporations fostered child pornography, manipulated children into receiving pornography, and induced them to steal copyrighted works (via downloading movies and music software for free), in order to build a distribution network of massive proportions.

<http://oversight-archive.waxman.house.gov/documents/20040817153928-98690.pdf>

Remember, in 2007 it was widely reported that Lime Wire was installed on 18% of all

Personal Computers. Lime Wire was exclusively distributed by Cnet.com aka Download.com. The goal of course in creating this massive Bittorrent network distributed across 100's of millions of computers was to minimize the cost of bandwidth to the streaming content provider saving 100's of millions of dollars in bandwidth costs. This was arranged to benefit the Azureus / Vuze Network, Fanhattan, and Glam Media.

<http://venturebeat.com/2007/12/19/vuze-takes-20-million-for-iptv/>

## The Ring.

Paul Allen through Vulcan (Ventures) and Jim Bryer (Accel Partners) funded with billions of dollars in investment, the development of, Bittorrent, Azereus and other notorious file sharing programs distributed virally through Cnet.com.

As well as the addition of the Bittorrent Prodigal to Lime Wire  
[http://www.zeropaid.com/news/7950/limewire\\_gets\\_bittorrent/](http://www.zeropaid.com/news/7950/limewire_gets_bittorrent/)  
Bittorrent Usage surges past Kazaa reported July 14 2004 yet never sued (as reported on CNET )

[http://web.archive.org/web/20040806125655/http://news.com.com/Survey%3A+Movie-swapping+up%2C+Kazaa+down/2100-1025\\_3-5267992.html?tag=nefd.top](http://web.archive.org/web/20040806125655/http://news.com.com/Survey%3A+Movie-swapping+up%2C+Kazaa+down/2100-1025_3-5267992.html?tag=nefd.top)

## The People

Jarl Mohn, Shelby Bonnie, Neil Ashe and Quincy Smith were all employees of Viacom's Sumner Redstone. These men all knowingly distributed these insidious programs through websites such as Cnet, ZDNet, and Download.com. They were further distributed through hundreds of co-branded sites via their master domain www.COM.com - This further implicated a huge number of major Corporations who unwittingly aided and abetted the most

repulsive crime of the Century.

Furthermore, Shelby Bonnie, the former founder and CEO of Cnet, held seats simultaneously on the boards of both CNET and Warner Music for two years. During this time, Warner CEO Edgar Bronfman Jr. sued Lime Wire for copyright infringement, and very publicly complained about the huge monetary damage it had inflicted upon his record company, Warner Music.

However, at the same time, Shelby Bonnie, a sitting board member of Warner Music, was also serving as a director of Cnet.com, the exclusive distributor of Lime Wire software. More than 220 million copies in fact.

( <http://www.waynerosso.com/2011/06/20/warner-music-director-brings-interesting-conflict-to-board-room/> ) Directly involved are Leapfrog Ventures, Redpoint Ventures, Greycroft Partners and BV Capital and Vulcan who have directly funded these schemes.

C. Paul G Allen.

Paul Allen was Chief Technology officer and founder of Microsoft.

He Funded CNET as the first major investor of their TV Channel. He funded the development of Azereus, a P2P file sharing application that was later rebranded as Vuze and is now called Fanhattan. Fanhattan is an HD video delivery system for the Internet.

This was masterminded with his Chief Technology Officer, Paul Gardener and CEO Olivier Chalouhi.

4

Paul Allen has a history of involvement in the Film and Cable Television business by owning and controlling Charter Communications Inc, which filed for bankruptcy in 2009

saddled with a debt of 21 Billion Dollars.

[http://www.theregister.co.uk/2009/02/13/charter\\_files\\_chapter\\_11/](http://www.theregister.co.uk/2009/02/13/charter_files_chapter_11/)

Paul Allen also personally financed Shelby Bonnie's software download website Cnet.com/Download.com in order to distribute software, primarily file-sharing P2P applications. <http://www.fundinguniverse.com/company-histories/CNET-Networks-Inccompany-History.html>

Furthermore, Paul Allen was the financier and Executive Producer of an Independent movie called "Hard Candy". Hard Candy is defined as "An underage girl - often aged 12 to 16 - who is particularly attractive and/or gullible."

Hard Candy, the film, is a story about an Internet pedophile called Jeff

Kohlver, who ensnares a 14 year old, girl called Hayley Stark. After being seducing by Kohvler, Haley turns out to be a highly intelligent psychopath, who gets Kohlver to kill himself.

(<http://www.youtube.com/watch?v=1PXYjFI0uXg>)

The film is widely reported as one of the most disturbing films ever made and has been banned in multiple countries. It was distributed by Lionsgate, a company which Paul Allen co-owned.

Inset - Paul Allen to the left and the character actor who plays Kholver; Pictured on the right.

#### D. File-sharing and Torrents. - Azureus.

In 2006, Paul Allen and Jarl Mohn (who is currently on the board of Sumner Redstone's Viacom) financed and developed the distribution of Azureus/Vuze, a file sharing torrent application also the two men were closely involved in the financing and development of Cnet and ArtistDirect/Mediadefneder.

In 2007, Azureus, Morpheus and others were sued by the French Music Industry Group, SPPF, under the new provisions of copyright law passed by the French Parliament, to protect Artists from file sharing. To combat this, Azereus was simply rebranded as "Vuze" and continues to be distributed by Cnet.com.

<http://www.billboard.com/news/france%E2%80%99s-sppf-sues-morpheus-azureus-1003599084.story#/news/france%E2%80%99s-sppf-sues-morpheus-azureus-1003599084.story>

Microsoft ( Distribute Content to the X-Box Network)

<http://techcrunch.com/2009/03/23/vuze-bittorrent-client-now-streams-video-to-ps3-xbox-360/>

5

#### III. Cnet.com and Download.com.

In 2006, Shelby Bonnie resigned as CEO of CNET under a cloud of suspicion involving the backdating of stock options. He continued, however, to serve as a director of CNET Networks until 2008, when Cnet was sold to Sumner

Redstone's CBS Interactive. A deal that was brokered by Quincy Smith, and overseen by the current CEO and President of CBS Networks, Les Moonves.

The sale was reported at \$ 1.8 Billion dollars. The SEC filings, however, show that the actual number was \$ 2.8 Billion dollars. We suspect that the additional \$ 1 Billion was distributed to the Cnet shareholders at the time of the sale to CBS who were disgruntled at the undervalued purchase price. Interestingly, this coincided with Cnet cofounder Shelby Bonnie being embroiled in the Cnet stock back dating scandal.

[http://articles.sfgate.com/2006-10-12/business/17314432\\_1\\_halsey-minor-shelbybonnie-cnet-networks/](http://articles.sfgate.com/2006-10-12/business/17314432_1_halsey-minor-shelbybonnie-cnet-networks/)

and <http://paidcontent.org/article/419-breaking-cbs-acquiring-cnet-for-18-billion/>

It is said that Bonnie was later cleared of wrongdoing in the stock backdating scandal, however, we have not been able to find any actual proof of this vindication.

CBS's Cnet.com and Download.com have been and still are virtually the exclusive distributors of the most notorious file sharing P2P applications. This includes but is not limited to, Lime Wire, Bittorrent, eDonkey, Azereus, Bearshare, Grokster and Morpheus.

Furthermore, it also includes their "forks". Forks are the same versions of software applications branded with different names. In this case, the forks of P2P applications include Frostwire, UTorrent, Bitcomet and Vuze. All of which and more can be download from Cnet.com today.

[http://web.archive.org/web/20050208142637/http://reviews.cnet.com/4520-6450\\_7-5020828.html](http://web.archive.org/web/20050208142637/http://reviews.cnet.com/4520-6450_7-5020828.html)

These people's arrogance was such that they felt safe enough with their slogan "the trusted name of CBS" to actually host links right from their websites to download known copyrighted material. Obviously fostering children to believe the notion that it is ok to steal.

In fact, it could be argued that it was not just children that these People corrupted, but also you and I, the adults.

In 2010, Federal Judge Kimba Wood, finally shut down Lime Wire, a company built by a group of companies and Investors that included Paul Allen.

After years of looking at the evidence, Judge Wood read the following expert statement in Court, "since 2007 (when CBS bought Cnet), "the number of peer to peer file sharing applications has mushroomed." And that... "Lime Wire was downloaded over 220 Million times from one site,

download.com.” Download.com is also known as Cnet.com

[http://money.cnn.com/2010/10/27/technology/limewire\\_court/index.htm](http://money.cnn.com/2010/10/27/technology/limewire_court/index.htm)

Today in a clear contempt of Court Download.com/Cnet.com continues to distribute FrostWire and other banned applications like Kazza Lite hiding behind lies that the software only employs legal methods of file sharing and blocks distribution of known copyrighted materials. This is a lie.

Recently the Azereus file sharing engine a far more powerful system than Lime Wire has actually replaced the Lime Wire engine in most peer to peer applications. Azereus which is also known as Vuze.

Here are just a few of many forks of Limewire that were and are being distributed on Cnet

### CNET editors' review

Reviewed by: CNET staff on March 11, 2010

We review a lot of peer-to-peer file-sharing applications, and many of them are pretty similar. After all, there are only so many things a P2P program can do, and only so many ways that you can arrange those features. With CitrixWire, however, we've discovered a P2P program that is entirely identical to another, which is a first for us.

We had just finished evaluating Addax, another P2P program, when we launched CitrixWire. We were struck by a sense of deja vu. True, Addax's skin was yellow, while CitrixWire's was green, but since both programs are skinnable, we were quickly able to match up the color schemes. We ran CitrixWire and Addax side by side, and they were indistinguishable. Everything was the same, from the interfaces to the features and menus. We're not sure which of these came first, or why the copycat version was released, but we can say that both of the programs are entirely adequate, though not outstanding,

### Publisher's description

From [ShareZillas](#):  
LimeZilla is a brand new BitTorrent client that aims to group together most top features available in advanced file sharing software. Derived from Limewire, the most popular p2p application, LimeZilla pushes the convenience and high-speed downloading to the next level. LimeZilla offers support to the Gnutella file-sharing protocol which means you'll be able to connect to millions of peers and search for your wanted files whether movies, music, games, applications, ebooks or other. Thanks to the increased number of ultrapeers and optimized search results, the software offers a rich download experience. The program lines up a multitude of useful features such as dynamic querying advanced system for finding rare files, turbo-charged downloads, an easy-to-work-with, stylish and highly intuitive user interface.

### Publisher's description

From TorrentRaptors :

LimeShare Pro is a peer-to-peer file sharing client for the Gnutella network designed to help exchange and distribute data over the Internet in a fast and secure way. The program is written in Java, and uses the Limewire code but brings some advantages of its own such as a revamped layout, lack of DRM filters, optimized search results, and turbo-charged connection. LimeShare Pro Main Features: smart interface with multiple search tabs; advanced file searching: by artist, title, genre; built-in audio-player; optimized search results; improved download speeds; technical support.

Lime Wire.

6

The download results on Cnet are constantly being changed to hide the real damage it continues to cause.

However, as soon as Lime Wire was shuttered, other versions of the same software remained on Cnet and partner sites. The numbers are staggering. Reaching over at least 2 Billion downloads and counting. As mentioned above, please note that from time to time, Cnet lowers its download numbers to hide the true extent of their crimes.

B. Intent.

The facts also prove that these individuals knowingly did these crimes with total disregard for their fellows, the markets, morality, the rule of the law, and most importantly the innocence of children.

Archived pages of CBS shows how they offered children known copyrighted songs for download directly from their pages with embedded links to thousands of works from hundreds of artists. This includes works by artists such as Madonna, U2, Britney Spears, Britney Snoop Dogg, Beyonce, and many, many more.

For example, children who wanted to pirate Eminem without even having to use P2P software (this could be seen as legitimizing piracy), could do so directly from CBS/Cnet's website pages. Not through file sharing, but directly from CBS owned web pages.

One example of thousands of these pages can be found on the Internet WayBack Machine at Archive.org: All one has to do to engage in such an illegal act is scroll down to the first link mynameis2.mp3 – 3,951k 100% from the link found at:

<http://web.archive.org/web/20010802111122/http://music.search.com/search/eminem.html?tag=st.mu.top.list.18>

C. Illegal Ploy to Save the Company.

In 2003, San Francisco California, Cnet.com was at the brink of closure. The then chief executive officer and co-founder Shelby Bonnie partnered with former MTV board member Jarl Mohn (who remember is currently on the board of Sumner Redstone's Viacom).

Soon after Mohn joined CNET, and probably due to his knowledge of the Music World, copyrighted songs began to be served directly from Cnet's web pages. From that date onwards, illegal file sharing accounted for over 70% of Cnet's business. These downloads were largely downloaded by Children between the ages of 11 to 17.

Another example of known copyrighted works that could be illegally downloaded directly from a CBS/Cnet owned web page is Linkin Park. Please scroll down to Jeff\_Mucha-Gwenterrah-parkN,mp3 – 4,927k 100% from the link found at:

COPY PASTE the link directly to your browser as it may change.

[http://web.archive.org/web/20010710114552/http://music.search.com/search/linkin\\_park.html?tag=st.mu.top.list.6](http://web.archive.org/web/20010710114552/http://music.search.com/search/linkin_park.html?tag=st.mu.top.list.6)

Furthermore, and as QUOTED BY CNET EDITOR: "To make this slightly easier, CNET has put together its own MP3 Web search service"  
An Internet Archive link of historical data where CNET had such preset links to known copyrighted material can be found here:

COPY PASTE the link directly to your browser as it may change.

<http://web.archive.org/web/20000620025543/http://www.search.com/guides/4.html>

#### D. Fraudulent Precedent/ Faking Bullying and Criminality.

As you will see, the despicable schemes described in this document were perpetuated through bullying, criminality and wanton disregard for an individual's rights, and in many cases, their personal freedom.

8

For example, in this CBS News report, a man faces 20 years in jail for downloading and deleting child pornography after using Lime Wire.  
(<http://www.youtube.com/watch?v=0xbRaY1XxME>)

Or was it....

ABSTRACT - In our research over the past two years, we further believe we have uncovered the truth behind a number of these "Criminal Prosecutions", which were championed primarily by the RIAA (Recording Industry Association of America). The RIAA is the trade organization that supports and promotes the financial well being of the major Music Labels in the USA, which include BMG, Warner Music et al.

We have spoken to a number of individuals who as children, at the time of their trials some years ago, were prosecuted in Court by the RIAA and fined millions of dollars for illegally downloading music.

Surprisingly, we found that these trials were in fact a sham. Individuals, who will currently remain anonymous, were in fact never guilty of their crimes. They were instead set up and paid off in order to set precedent intended to

fool the Music Companies not involved, and the public at large, into believing that piracy was being policed.

Hundreds of Millions of people in the World have illegally used Lime Wire, or variations of it. If you are an avid Internet user, you probably have done so yourself. If haven't, you know someone who has.

Ironically Jack Vaughn, CEO of CBS Comedy Central, has stated:  
"We looked at the Lime Wire Store, and we said, 'Are they going to pay? Are they going to pay on time, and are they going to expose our artists to a new audience?' The answer was yes."

<http://www.theglobeandmail.com/news/technology/LimeWire-and-comedy-central-records-make-a-deal/article63563/>

#### E. SOPA (Stop Online Piracy Act).

The individuals and Companies blamed herein have also manipulated and lobbied Congress to pass draconian laws that they intend to use against their competitors, but not themselves. One of these laws is the Stop Online Piracy Act ("SOPA").

Though on the surface "SOPA" is a good and decent law, a number of the lobbyists championing SOPA have a very different agenda for its use. For example, Google Inc. has essentially ruined the perpetrator's efforts by becoming the dominating force on the Internet in recent years. Because of this, Viacom has vigorously sued Google's website YouTube for piracy.

9

SOPA would in effect give Viacom et al legal authority to have YouTube shut down within days as the "safe harbors" of the Internet would be eliminated. Please note that when YouTube was launched, its purpose was to be a "look but don't touch" media environment. However, illegal software called YouTube Video downloaders soon became readily available at none other than Cnet.com. This software allows users to rip off and illegally download videos posted on YouTube.

[http://download.cnet.com/1770-20\\_4-0.html?query=youtube+downloaders&platformSelect=Mac&tag=srch&searchtype=down](http://download.cnet.com/1770-20_4-0.html?query=youtube+downloaders&platformSelect=Mac&tag=srch&searchtype=down)

[loads&filterName=platform%3DMac&filter=platform%3DMac](http://download.cnet.com/1770-20_4-0.html?query=youtube+downloaders&platformSelect=Mac&tag=srch&searchtype=down)

YouTube has long discouraged downloading from its site and writes its software code to prevent it. Prior to their development in China and Russia, these YouTube downloaders were never seen before.

ABSTRACT - Please note that the head of Viacom/MTV Networks in China, Mei Yan, went from an average reporter's salary to a multi-million dollar executive's income overnight without any prior expertise in the Music Industry. She is the daughter of China's Governor of Censorship and is now considered one of China's 5 most powerful women.

(<http://www.thedailybeast.com/articles/2010/03/18/acensors-daughter-changes-the-system.html>)

Furthermore, Viacom's website Spike.com, formerly known as iFilm.com, is a video website built on videos stolen directly from YouTube.  
(<http://www.youtube.com/watch?v=2fpGNRmchdY>)

#### IV. The Plot Thickens....

The media guru known as Jarl Mohn is currently on the board of Viacom, of which Sumner Redstone is Chairman. Jarl Mohn was previously known as Lee Masters when he was a Radio DJ and working for MTV in the late eighties.

In 2005, Jarl Mohn through his company ARTISTdirect Inc, bought into media watchdog MediaDefender. Movie Studios and Record Companies paid many millions of dollars to MeidaDefender/MediaGuard in order to protect their Intellectual property.

An officer of Viacom, a part of the CBS/National Amusements empire invested in MediaDefender

MediaDefender, however, was later dropped by the RIAA and other watchdog organizations because of the company's illegal activities.

MediaDefender/MediaGuard was a company that monitored files available on file sharing networks on behalf of Viacom, Warner Music Group, RIAA and other media companies. MediaDefender/MediaGuard was furthermore a service funded and developed by the aforementioned people listed in this document.

As we stated in the beginning of this document, MediaDefender's employees also owned and controlled many porn sites of its own, and were fully aware of the Child pornography and illegal file sharing that was rampant in the distribution systems of Viacom's companies.

<http://torrentfreak.com/mediadefender-emails-leaked-070915/>

A copy of the hacked emails from MediaDefender's email servers that proves MediaDefender employees at the highest level, as well as their clients, knew the extent of the use of File-Sharing as a means of distributing Child Pornography:

<http://www.antitrust.slated.org/media-defender/4307.html>.

Jarl Mohn and Paul Allen's MediaDefender cashes in on Porn, one of many articles that report on MediaDefender employees exploiting their position to profit from Pornography:

<http://www.techdirt.com/articles/20080922/0312572327.shtml>

Most file sharing activities are focused on illegal, unethical, or immoral activity.

Downloading copyrighted music, copyrighted software, pornographic material, and even child pornography are the most common uses of peer-to-peer file sharing.

[http://news.cnet.com/P2P-companies-say-they-cant-filter/2100-1038\\_3-5149720.html?tag=mncol;8n](http://news.cnet.com/P2P-companies-say-they-cant-filter/2100-1038_3-5149720.html?tag=mncol;8n)

Cnet itself has reported this many times, and in fact went so far as to mock Senator Hatch's efforts to stop file sharing in 2004.

[http://web.archive.org/web/20040711194630/http://www.cnet.com/4520-6450\\_7-5142741-1.html](http://web.archive.org/web/20040711194630/http://www.cnet.com/4520-6450_7-5142741-1.html)

#### A. Child Pornography.

Child pornography was and still is widely available through P2P file sharing. For example, in the early days of P2P sharing, before the numbers skyrocketed it was recorded that in one day, the Gnutella P2P network (which Lime Wire is built on), had 464,000 search requests for "child pornography"- in one-single-day.

P2P networks allow total anonymity of where the files are being copied. Even though child pornography is illegal, it is widely available in P2P networks because it is not easily traced back to the originating source.

Interestingly, MediaDefender analytics disclosed regularly that Lime Wire was being used, primarily by children aged between 12 and 17, and that child pornography was widely distributed through the Lime Wire Network.

11

CNET's own reporting shows this as well:

[http://news.cnet.com/RIAA-Child-porn-rifeon-P2P-networks/2100-1028\\_3-5073817.html?tag=mncol;5n](http://news.cnet.com/RIAA-Child-porn-rifeon-P2P-networks/2100-1028_3-5073817.html?tag=mncol;5n)

#### B. An Example of the Culture in Legitimizing Porn to Children.

Snap.com was a Child Safe Search Engine that was acquired by Cnet.com from NBC. At some point after acquiring Snap.com, Cnet Executives decided that it would serve their purposes more to add keywords such as "bestiality" and suchlike adult terminology to generate more traffic to their search.

CULTURE "Cnet owned Snap.com had a culture of pornography."  
Tony Long 08.03.98 WIRED.com

It's an abrupt about-face for a service that only nine months ago declared unequivocally in a press release that "Snap Online does not accept any

pornographic advertising, nor does it contain pornographic listings in its directory of more than 100,000 hand-selected Web sites."

... According to Katharine English, Snap's executive producer, it was a solid editorial decision based on the age-old concern of giving readers what they want. "Our statistics showed that 40 percent of our users are looking for this kind of material," English said: "This is a user-driven decision that has a responsibility component in it."

A former Snap producer was more succinct: "No tits, no hits."

## V. Conclusion

It is imperative that we do not forget the existence of the tens of thousands of video files showing innocent infants and children being raped and trafficked in the name of File Sharing.

Cnet.com earns Billions in revenue from their "pay per download" services that they sell to software manufacturers who in part legitimately distribute their applications through

12

Download.com and affiliate sites. However, most of that revenue is in fact made by pay per downloads from shady producers of P2P software and the advertising wrapped around it.

The individuals and their companies identified herein need to be held accountable for their criminality. Without a doubt these predators, fostered the explosion of child pornography, pornography to children, illegal file sharing and the overall demise of the entertainment and publishing Industries.

It is the duty of every father, mother and self respecting human being, to demand and to compel the Authorities, to hold these Criminals accountable. To Seek out all their accomplices and freeze the profits that they made at the expense of Children.

The Scientific Government data provided at the beginning of this document and the data gathered throughout our research clearly guides the Federal Authorities in the direction of those they must immediately begin to Investigate.

Research & Documentation by Alki David, Mike Mozart and Lilly Ghalichi

13

In 2003, the US Government scientific study conservatively reported that 13% of all images downloaded by peer-to peer file sharing programs are Child Pornography.

NOTE: Download PDF <http://www.gao.gov/new.items/d03537t.pdf>

Lime Wire was and is one of the World's most widely distributed peer-to-peer file-sharing software (hereinafter referred to as "P2P").

In 2007, it was widely reported that Lime Wire was installed on 18% of all Personal Computers. For almost a decade, Lime Wire was exclusively, distributed by Cnet.com, which is also known as Download.com.
