

# SWISSX PROPRIETARY PROCESS & INTELLECTUAL PROPERTY LOCK NOTICE

## **Statement of Ownership:**

All processes described herein, including but not limited to sargassum biomass fermentation using molasses and brown sugar, microbial enhancement using coconut vinegar cultures, and high-heat carbonization via the SwissX Gloria Oven system, are the proprietary intellectual property of SwissX.

## **Protected Elements:**

- Sargassum-to-biochar conversion methodology
- Fermentation activation protocols
- Biological enhancement compositions (neem oil, manure integration)
- Integrated carbon + soil regeneration system

## **Legal Position:**

This process is protected as a trade secret and proprietary industrial method. Any unauthorized replication, reverse engineering, or commercial use without express written permission from SwissX constitutes infringement.

## **Enforcement:**

SwissX reserves all rights to pursue civil, criminal, and international remedies, including injunctions, damages, and seizure of infringing materials.

## **Integration:**

This IP lock applies to all associated certificates, carbon instruments, tokenized assets, and physical shipments derived from this process.
